**Editor Comments**

The case timeline is not entirely clear- in case presentation the terms "7 years ago and 2 years ago" are used with no reference point - i.e. its not clear if this means years from present date or years from initial presentation in 2002. There is another reference to 7 years on page 6. I would clarify this by noting either actual year or time from presentation to care of authors.

**Authors Response**

The inconsistent on case timeline has been corrected. It traces the case history from brain injury in 2001 until his the fully remission his distress.
